EDUCATION

University of Illinois Chicago, Chicago, IL

Expected May 2028

B.S. Computer Science | Transfer Student (Spring 2027)

Oakton College, Des Plaines, IL | GPA: 3.91/4.0

December 2026

Associate of Science, Computer Science

Coursework: Java Data Structures & Algorithms, Diff. Equations, Calculus I-III, Discrete Math, Linear Algebra

SKILLS

Languages: Python, C++, Java, TypeScript, JavaScript, SQL, Bash, HTML/CSS

Tools & Platforms: AWS (EC2), Docker, Linux, Git, GitHub Actions, PostgreSQL, Vercel, Supabase, Redis, Caddy

Frameworks & Libraries: FastAPI, React, pandas, pytest, Pydantic, httpx, Tailwind

Concepts: REST APIs, Async I/O, CI/CD, OOP, Rate Limiting, JWT Auth, Caching, LLM Evaluation, Backtesting

PROJECTS

ACROBOT | Python · Gemini API · GitHub Actions · pytest · [Repo](#)

- Built a GitHub Action that reviews pull request diffs with an LLM, schema-validating every finding and checking each line anchor against the parsed diff before posting one batched review
- Routed diffs through a triage model carrying 44x the review model's daily quota (800 vs 18 requests), metered by a two-clock rate limiter that posts a partial review instead of failing CI when the budget runs out
- Caught 2/2 deliberately planted bugs plus 2 unplanned edge cases across **11 PRs** on a live repo, with fixes merged
- Wrote **63 tests** and an eval harness that replays recorded API responses in CI, keeping scores reproducible against a nondeterministic model, with per-stage token, latency, and cost observability written to the Actions summary

AlphaLab | Python · FastAPI · React · PostgreSQL · Docker · AWS EC2 · Linux · Redis · Vercel · [Link](#) | [Repo](#)

- Shipped a full-stack trading analytics platform with **18 REST endpoints** and 12 React views behind JWT auth, per-user query scoping, and Postgres row-level security
- Migrated the Dockerized backend from managed hosting to AWS EC2 behind a Caddy reverse proxy with auto-renewing TLS and security-group-scoped ports, removing the free-tier cold starts that stalled first requests
- Wrote a state-machine backtester that races 4 strategies against buy-and-hold and SPY on Sharpe ratio, CAGR, max drawdown, and win rate
- Added a parameter sweep re-simulating up to 121 RSI threshold pairs per request with **70/30** chronological validation, guarded by a regression test that fails if any signal reads a future bar
- Built a scanner deriving 9 signals across 6 combinable filters, with per-ticker fault isolation so one bad symbol can't kill a scan

Watersim | C++17 · Zero Dependencies · [Repo](#)

- Built a terminal water simulator stepping a 7,680-cell height field through a two-buffer wave solver at 30 FPS
- Implemented raw-mode terminal I/O over termios with SGR mouse reporting, writing each frame in one write() syscall so it never tears; Moving boats compress their own wake into a visible Doppler effect

EXPERIENCE

Oakton College | Financial Aid Student Employee

Oct. 2025 - Present

- Built response flows for an Ivy.ai financial aid chatbot, triaging wrong answers back into the FAQ knowledge base and retesting after each change
- Assisted **60+ students weekly** by phone and in person with aid, tuition, and documentation, and kept **250+ records** current across Excel and internal systems

LEADERSHIP & COMMUNITY INVOLVEMENT

Computer Science Club, Co-President | Oakton College

Jul. 2026 - Present

- Scoped a campus bus tracker into a technical spec and onboarded 3 developers into parallel workflows

Computer Science Honor Society

Aug. 2021 - May 2025

- Co-organized 2 hackathons with 100+ total participants and mentored 5+ peers
